Listen to the Future

## Introducing 3 new compact models to the NEXEDGE™ range of Digital two way Radios from Kenwood.

NEXEDGE™ features Mixed Mode, the unique ability to communicate with all existing analogue radio equipment automatically without switching channel. This means that any investment in analogue is protected and allows for efficient and cost effective migration to a Digital network.

The three new NEXEDGE™ models, from the easy to use entry level NX-220E3 to the NX-220E, with 12+4 keys and display are packed with advanced features. NXDN® provides improved reception, even in fringe areas, has a range of Voice and Data security options and offers three levels of man down functions.

NEXEDGE™ also offers a range of add on features™ from OTAP (over the air programming) to telephone interconnect through a PSTN or PABX.

NEXEDGE™ Digital radio can make your business run smoother, easier and faster, make your personnel safer and more efficient and your customers happier. To find out more about the NEXEDGE™ range, full product and spec list as well as a comprehensive range of accessories go to:
